

Deployment of Machine Learning Models

Section 5.3b Notes

Commands

Cloning the repo (run this after forking):

```
git clone https://github.com/trainindata/deploying-machine-learning-models.git
```

Checkout the code at an earlier commit:

```
git checkout COMMIT_HASH_FOUND_ON_GITHUB
```

Setting the remote origin to your fork

```
git remote set-url origin
```

```
https://github.com/YOUR_GITHUB_ACCOUNT/deploying-machine-learning-models.git
```

Creating a new branch

```
git checkout -b your-branch-name
```

Pushing the branch to your fork (where you can then open a pull request on github):

```
git push origin your-branch-name
```
